

Digga's dedicated bale spears are a great way to move and stack both round and square hay bales. The innovative design is engineered to maximise strength and durability, while using minimal material to reduce weight and ensure more machine lift capacity can be used.

It features a strong Australian engineered and fabricated loader frame, which is finished off in a scratch resistant textured powder coat paint.

The frame is coupled with dual Conus II straight spears that are finished in highly visible yellow paint, for optimum vision and safety. It's the 'must have' attachment for the farm.

## FEATURES
